BRANDED PROMOTIONAL TEXTILE ADLER®

FIND
ADLER® IN
13
EU COUNTRIES

The ADLER® brand celebrated its 15th birthday at the end of last year. During this period it has undergone remarkable development and has become a trusted and respected brand of promotional textile in 13 EU countries.

No success can be achieved without the daily hard work and constant innovation. Every year, thus ADLER® expands its product range, reflecting the latest trends in order to satisfy even the most demanding client.

What deserves celebration is not only the anniversary itself, but the perseverance and skills of the people who stand behind the brand's success. Without them and without you - our customers - there would be no anniversary, and thus no reason for celebration. ADLER® therefore thanks all of you!

ADLER® - the quality you can trust.

ADLER® BRANDED PROMOTIONAL TEXTILE

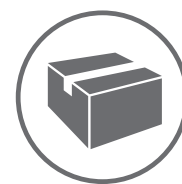

QUALITY

Quality and innovation are the two words characterizing ADLER® promotional textile. The quality of the product projects its value, innovation on the other hand reflects the latest trends and demands.

SERVICE

ADLER® products are already available in 13 EU countries. Therefore satisfied customers, who appreciate the speed of delivery and the quality of service, can be now found in all corners of Europe.

5 MILLION PIECES IN STOCK

Stock availability and the associated speed of delivery are among the benefits that are appreciated by every customer. Thanks to the modern logistics center more than 5 million pieces of textile are ready for dispatch.

PRINTING AND EMBROIDERY

Choose from a wide range of printing, embroidery or other textile customization. Be it screen printing, digital printing, sublimation printing, laser engraving, applied embroidery, pressing or glittering stones - the choice is up to you.

All ADLER® products go through laboratory tests and bear the seal of quality Oeko-Tex Standard 100. This internationally recognized certificate confirms that none of the textile materials used does not contain substances that are harmful to human health or the environment.

Integrating social and environmental aspects into the production process is an essential part of our philosophy. Working conditions improvement and compliance with the standards of safety and health at the work place is a never ending process.

ADLER® is a member of leading European associations uniting field's top professionals. We work together on expanding our know-how and participate in major trade fairs where you can personally meet us and our products.

Let's contribute together to sustainable development and environmental friendliness! Ecological recycling and disposal of e-waste is a necessary prerequisite. By strengthening the awareness about eco-friendly behavior we make sure nature is treated with respect.

HOW TO CHOOSE THE RIGHT PRODUCT?

When choosing your product always consider the purpose. Do you need corporate clothing, workwear or sportswear? How often will the owner wear it and under what conditions?

According to your answers, choose the right variation for you:

1. material

cotton, polyester, polyamide, elastane, etc.

2. weight

depending on the material you can choose from the weight range of 145 g/m² up to 360 g/m²

3. type

patterns or types of knits and weaves (single jersey, fleece, pique, terry, linen cloth, twill, softshell etc.)

4. colour

colours and colour combinations

5. design

product design

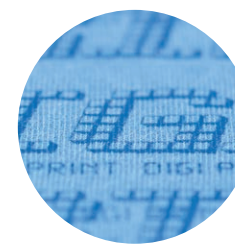

6. customization

enhance your product with printing, embroidery, paper tags or individual packaging

The choice is yours!

PRINTING

Digital printing

An ideal technology for low quantity printing orders. Pre-printing preparations are not necessary. We print directly onto textiles using a state-of-the-art KORNIT® printer. Special water-based pigmented inks are used for printing. The printing is guaranteed to be wash-resistant up to 30°C. The printing can be ironed.

Sublimation printing

Is suitable for textiles made of synthetic fibre. Disperse dye is printed on a paper underlay from which it is transferred to the textile in the form of vapour. The printing does not need fixation. Colour stability is very good, imitations (significantly cheaper) of colourful woven goods are barely distinguishable from the original. This printing method is ideal for transferring photographs and other images that nevertheless must be enclosed in the shape of a square or rectangle.

Silk-screen printing – direct printing

The oldest and so far the most effective textile printing technology. We use a machine, which enables us to reach high daily production (up to 15,000 prints) while maintaining the same print quality from the first to the last print of the order. With the use of this technology, we are able to print practically all motifs, from simple to photo-realistic ones. The printing is guaranteed to be wash-resistant up to 40°C. The printing cannot be ironed.

Silk-screen printing – transfer printing

A printing method by which a motif is first printed on a special transfer foil, which gets fixed with glue, and subsequently the motif is ironed onto the textile. This method is primarily used for printing on caps and products not suitable for direct printing. It cannot be applied to water repellent materials. The printing cannot be ironed.

CUSTOMIZATION

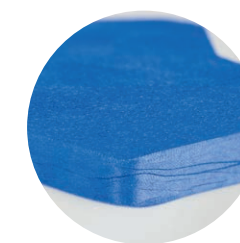

Laser engraving

The modern technology allows layers to be engraved onto textile materials using a laser. Unique and so far uncommon branding of fleece products.

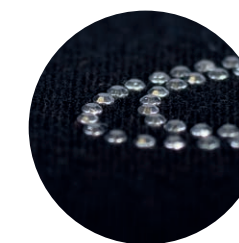

Embroidery/embroidered patches

This is a very high-quality way of presenting motifs, logos or slogans on textile products. In order for us to be able to sew a certain motif onto a product we have to create a sewing program. In order to create this program we need to have a high-quality digitized pattern (tif, cdr, pdf). Your motif is subsequently transferred into the sewing machine's program. The motif is sewn directly onto the product or it is possible to create an embroidered patch that is subsequently placed onto the product.

Pressing

Pressing is suitable for 100% cotton products without buttons and zips that could be damaged by the pressure. This technology presses products into a shape chosen by you thus making an unusual gift or promotional item. You can select from our library of shapes or send us your own.

Glittering stones

This special technology can be used on shirts, caps and polo shirts with motifs of any size and colour combination. The stones can be either transparent or opaque and come in sizes from 1.5 to 8 mm. The minimum order for textiles with this application is 100 pieces. Products decorated in this way must be washed inside out at 40°C.

MATERIAL GUIDE

Most ADLER® products are available in the following types of weave.

SINGLE JERSEY

Fine course knit fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The thread utilized to make the fabric influence the quality of the final product. ADLER® products are manufactured from high quality ring spun thread. The material is ideal for printing and embroidery. These items are manufactured in various weights (145 – 200 g/m²).

PIQUE

Course patterned knit fabric with a three-dimensional geometric pattern. The double jersey weave is supplemented with an underlying thread that ensures very little stretching in width. Products are suitable for printing and embroidery. These items are manufactured in various weights (170 – 220 g/m²).

INTERLOCK PIQUE

This is weft knitted interlock fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This knitting has reduced extensibility. These items are manufactured in 150 g/m² weight.

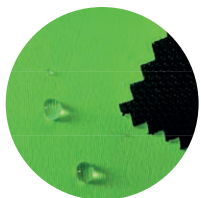

FLEECE

Course knit fabric with a characteristic dense teased soft surface and outstanding insulating attributes, suitable for all kinds of weather. It is able to conduct sweat away and stop wind from penetrating. Products are suitable for embroidery and laser engraving. These items are manufactured in various weights (250 – 360 g/m²).

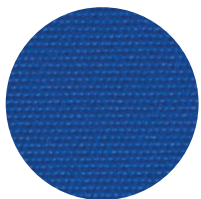

FILLERS

Course knit fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases absorption as well as the volume of the fabric and adds to its strength. Filler fabrics with voluminous and soft thread are teased for greater insulation. Products are suitable for printing and embroidery. These items are manufactured in various weights (250 – 320 g/m²).

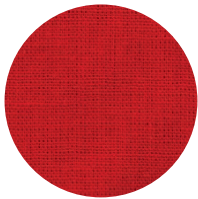

SOFTSHELL

Softshell is a laminated textile for modern and sports clothing and clothing for outdoor activities. It is divided into membrane and non-membrane. Clothing made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable. These items are manufactured in various weights (210 – 300 g/m²).

CLOTH

Cloth fabric is made of strong, regularly repeating weave. It does not make a pattern. It is smooth and suitable for printing and embroidery. The threads of the weave can be reinforced. These items are manufactured from high quality combed or cut cotton, PES or PAD.

POPLIN

Poplin in its early days was made by using a silk warp weave and a worsted yarn weft. The result is a sturdy fabric that has noticeable ridges. Today poplin is popular in shirts and pants and is often a combination of softer and heavier grades of cotton. Because of its manufacturing process, it tends not to wrinkle easily. These items are manufactured in various weights (120 – 125 g/m²).

TWILL

Twill fabric features diagonal spacing that is regularly repeated. The fabric is looser, warmer, softer, and more elastic than cloth. It is suitable for printing and embroidery. These items are manufactured from high quality combed or cut cotton or from mixtures with polyester.

TERRY

Loop fabric made of quality cotton in higher weights (350 – 450 g/m²) that is absorbent, soft-to-touch and has firm loops on both sides.

CARE SYMBOLS

Take care of your clothing so that it can serve you as long as possible.

maximum washing temperature 30 °C
